# Superstore Sales & Profit Analysis with Distribution Optimization

Tableau Project

By- SUPRITH S

# Project Objective

This project analyzes Superstore sales data using Tableau to identify trends, patterns, and inefficiencies in business performance. The focus is on understanding **sales, profit, and regional performance** to improve decision-making.

- Analyze sales and profit performance
- Identify loss-making areas
- Improve business efficiency using insights

# Key KPIs

| total sales | total profit | total quantity |
|---|---|---|
| 2,297,201 | 286,397 | 37,873 |

Total Sales: 2.29 Million

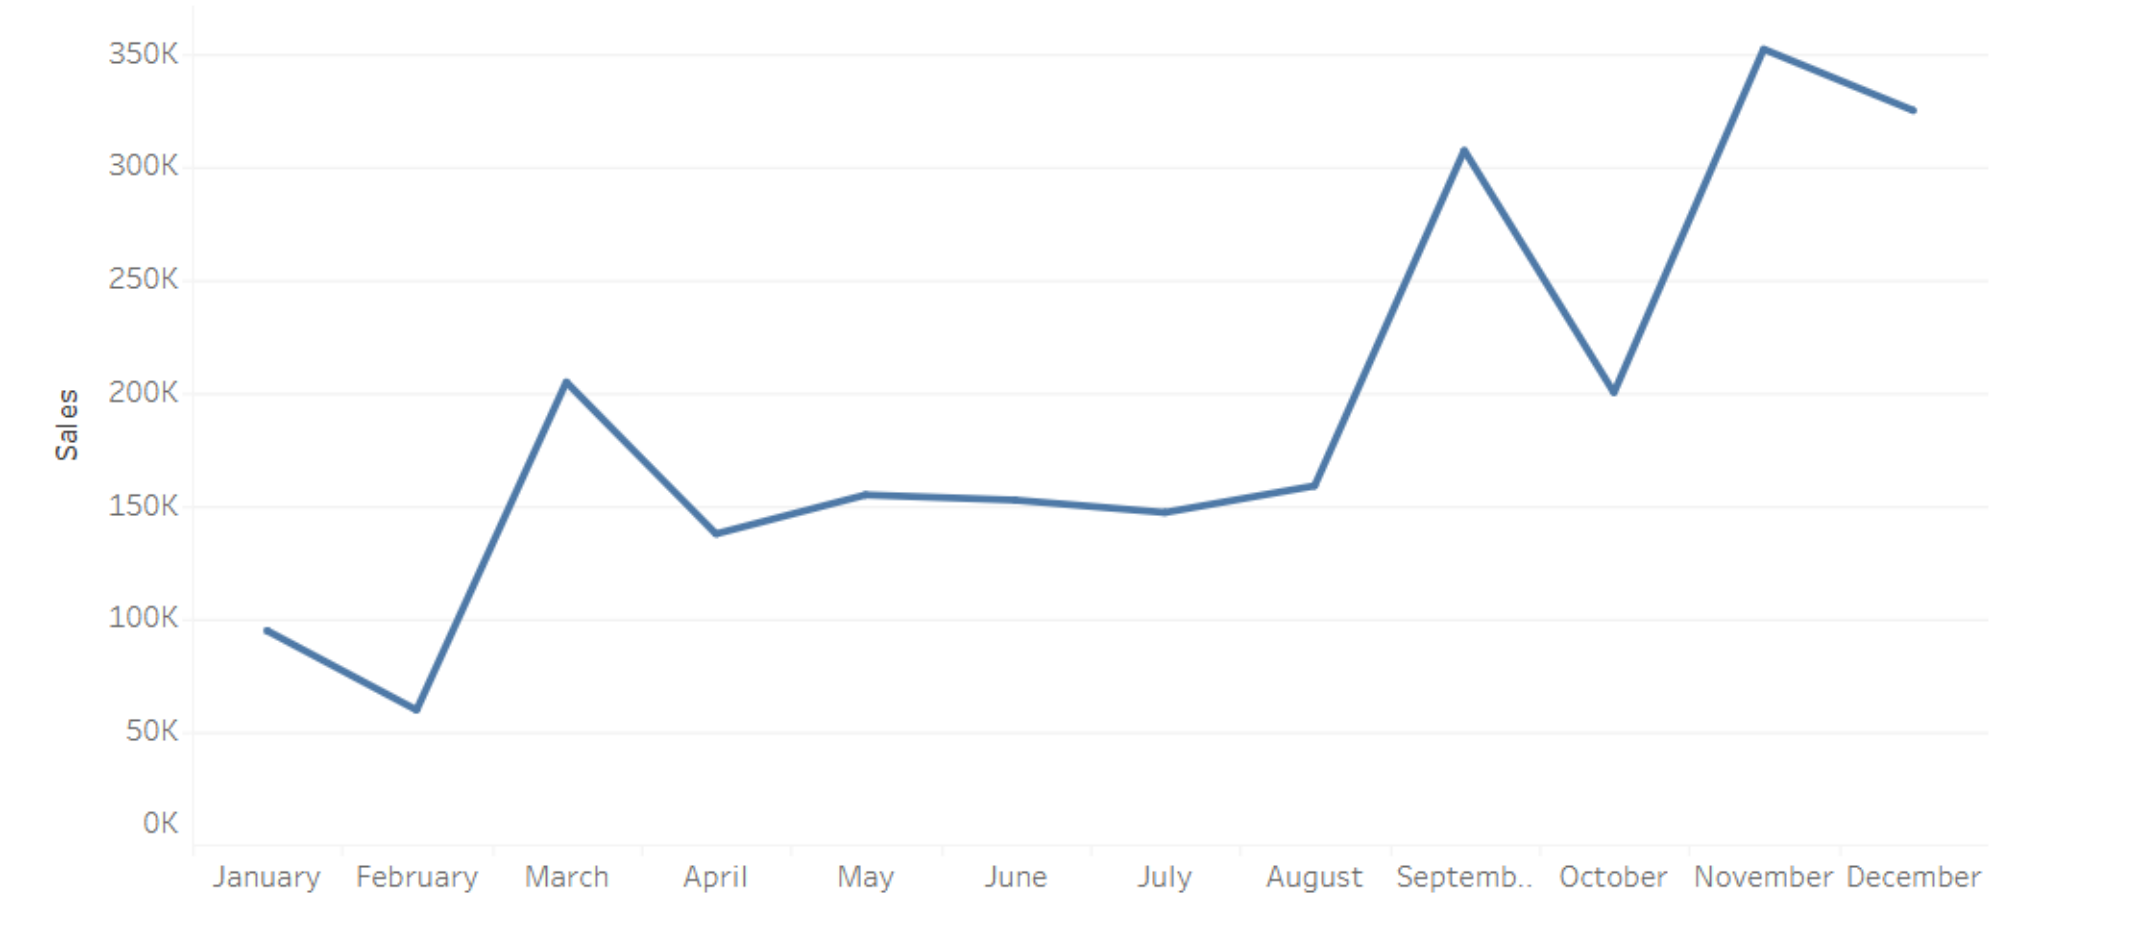
Total Profit: 286K

Total Quantity: 37K+

Overall business is profitable

"The business has strong overall performance with over 2.2 million in sales and 286K profit."

# Monthly Sales Trend



"Sales increase throughout the year, peaking in November and December, indicating seasonal demand."

# Sales of Furniture

| New York | Los Angeles | Seattle | philadelphia | San Francisco |
|---|---|---|---|---|
| 75,691 | 54,000 | 40,996 | 36,496 | 36,357 |

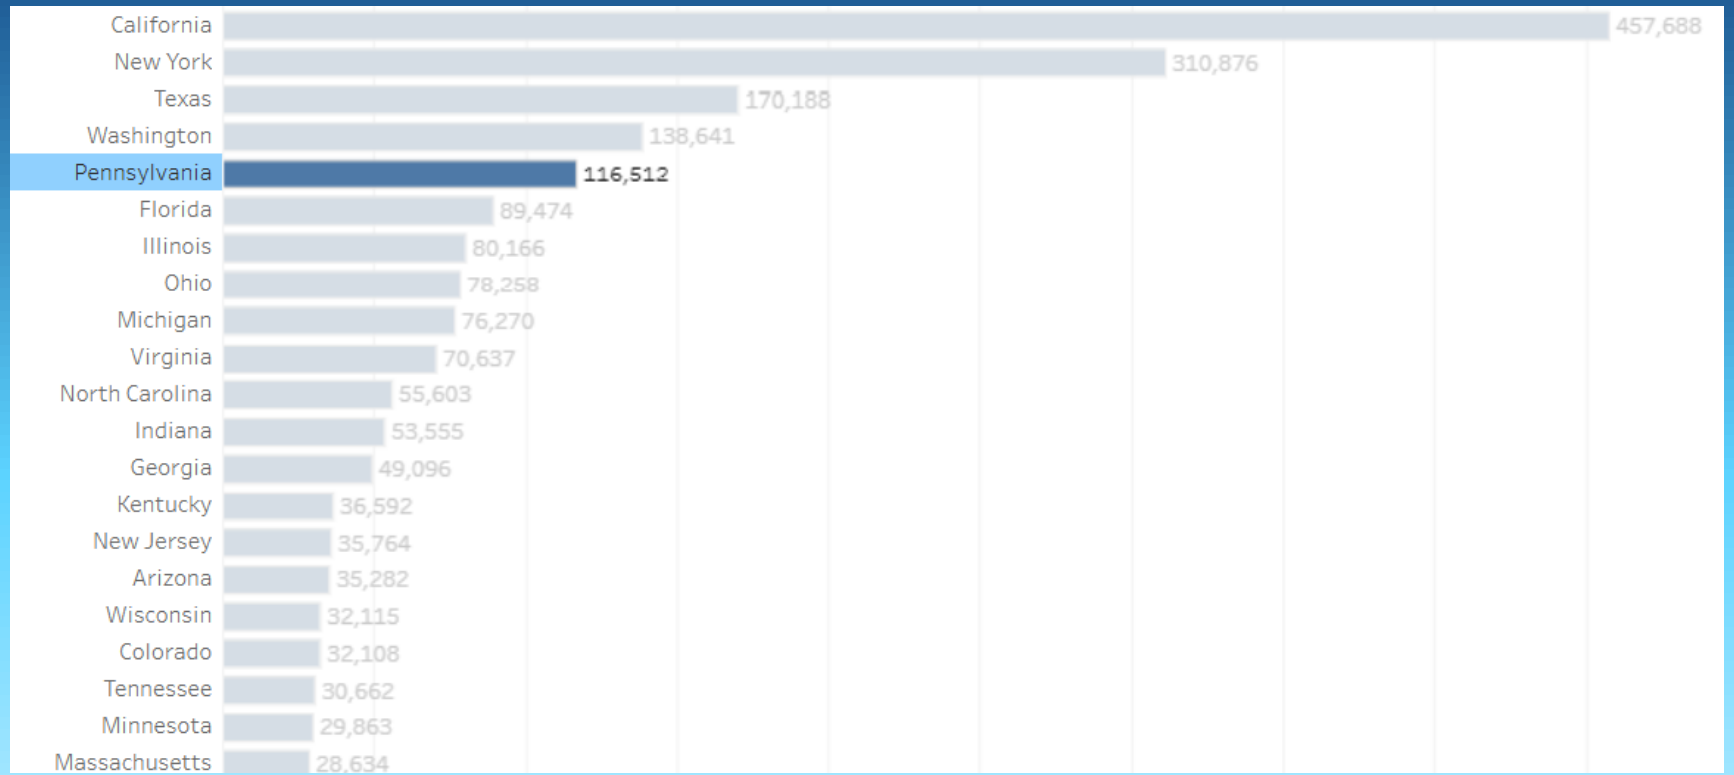
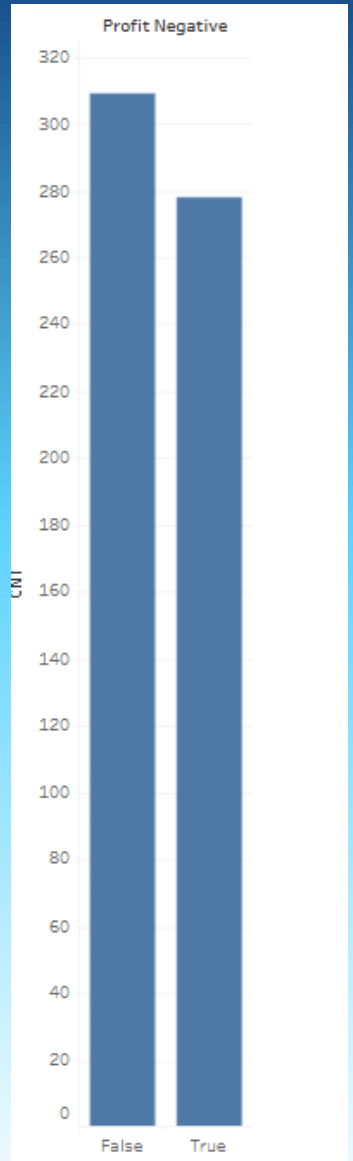
## Sales of Furniture

# Profit By State





Pennsylvania is one of the superstore's biggest market by sales

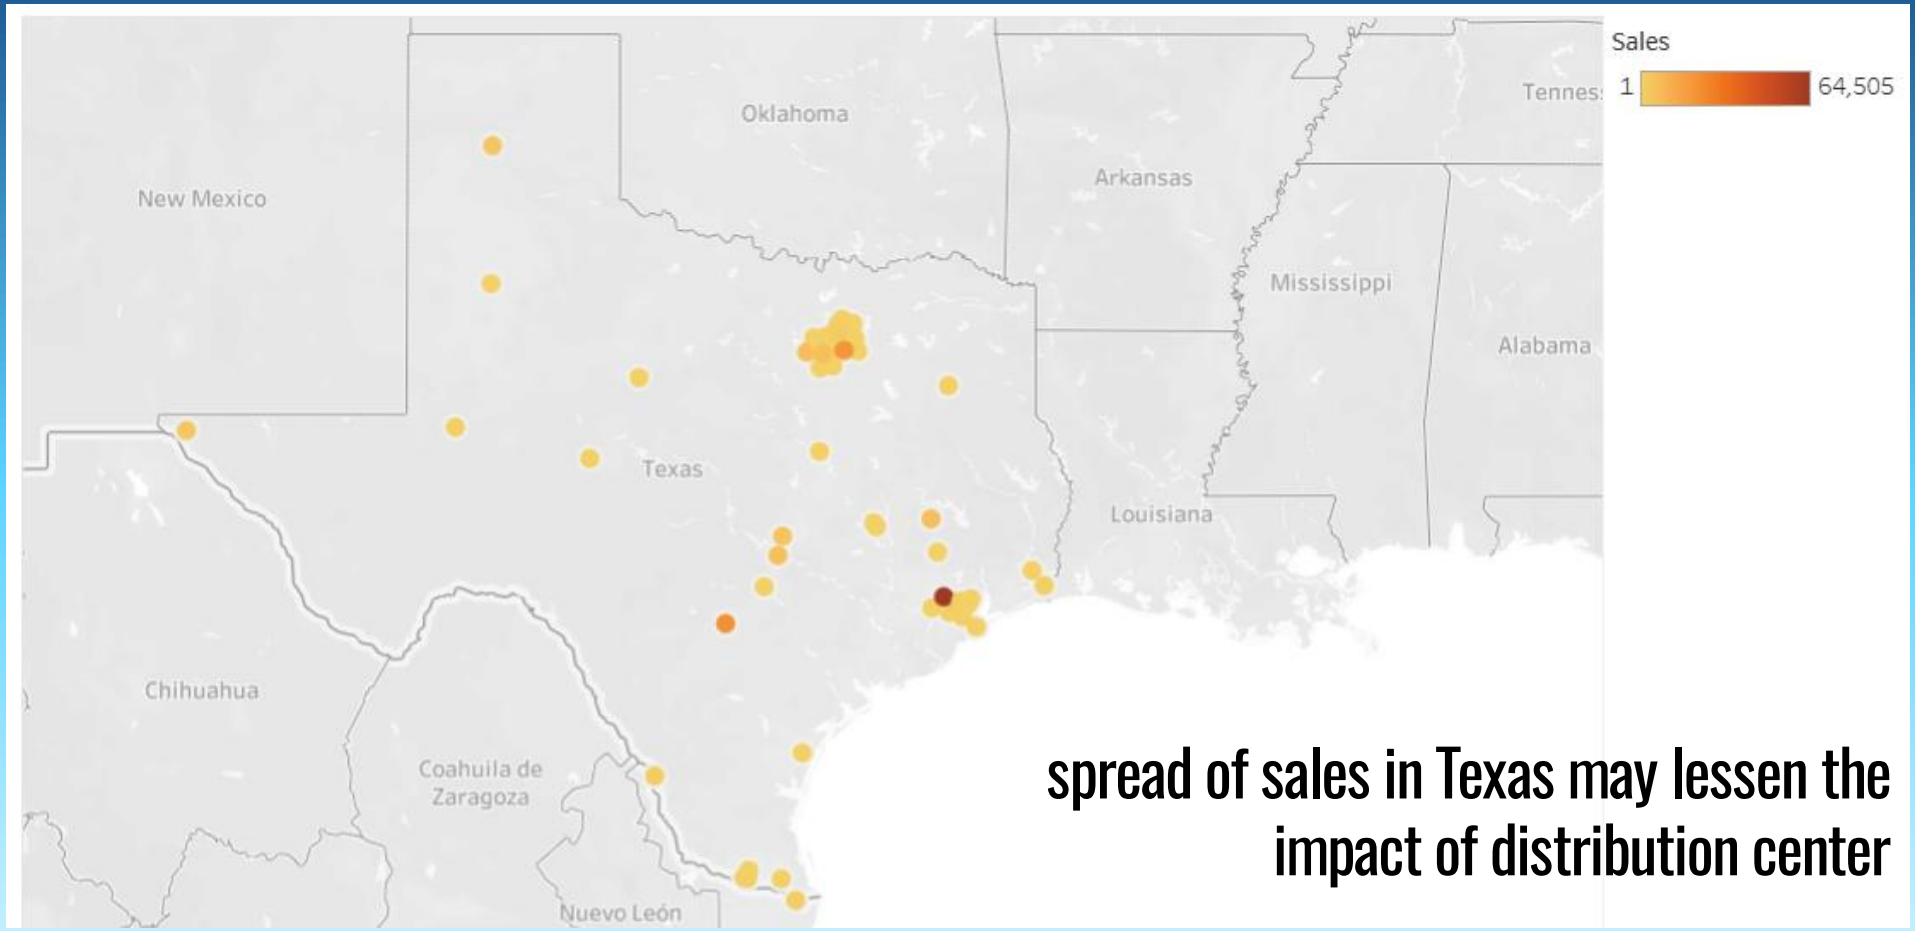
"California and New York lead in sales, while Pennsylvania also contributes significantly."
"Despite high sales, Pennsylvania shows negative profit, which is a major concern."

# Profit By State

Positive profits in Washington, California, but a similar story in Texas

"New York leads in city-level sales, followed by Los Angeles and Philadelphia."

# Distribution centre near Philadelphia



"A distribution center near Philadelphia will reduce logistics costs, improve delivery efficiency, and convert a high-sales but loss-making region into a profitable one."

# Key Findings from Analysis

- Total sales are high (**~2.29M**) indicating strong business performance
- **Sales increase towards year-end**, showing seasonal demand
- **Top performing states**: California, New York, Texas
- **Pennsylvania has high sales but negative profit** (major issue)
- High number of **loss-making orders in Pennsylvania**
- Overall profit is positive (**~286K**) but not consistent across regions
- **Furniture category is unprofitable**
- **Tables and Bookcases** are major loss-making sub-categories
- **Technology category generates highest profit**
- High **cost of sales and shipping** affecting profitability

# Recommendations

- **Build a distribution center near Philadelphia**
- Reduce **shipping and transportation costs**
- Improve **delivery time and operational efficiency**
- Optimize **supply chain and inventory management**
- Focus more on **profitable categories (Technology)**
- Reduce or improve **loss-making products (Tables, Bookcases)**
- Implement better **pricing and discount strategies**
- Use high-performing regions as **benchmarks for efficiency**

# Conclusion

- Business is **performing well in sales but has inefficiencies**
- Profitability issues are mainly due to **high logistics and operational costs**
- Pennsylvania is a **high-demand but loss-making region**
- The problem is **not low sales, but poor cost management**
- A distribution center near Philadelphia can **significantly improve profit**
- Data-driven decisions can help **optimize overall business performance**

- THE END -
